Inspector Report

Team 5: The FAMSE

Members: Anthony Morales, Lenin Moran, Leonardo Narvaez.

Team Inspected: Team 1 The JSONS

3.- Software Requirements.

Improve the drafting of the plan of definition of the plan, following the IEEE format:

It is offered to make an intense review of the plan of definition of the plan to ensure that it meets the standards established by the IEEE format.

Make sure the client interfaces are in Spanish if applicable:

If the plan involves generating client interfaces in Spanish, it is essential to assert that each of the interfaces are written in that language. This will contribute to the ease of use and understanding by Spanish -speaking users and will improve their experience with the system.

4 and 5.- Use Case and Class Diagram

Improve the class and use diagram:

An intense review of the class and the use diagram is proposed to ensure that exactly the specific requirements of the plan. This involves reviewing the proper representation of the classes, the interactions between them and their relationship in the system.

Align the diagram with the description of specific requirements:

It is substantial that the class and the use diagram are online with the description of concrete requirements of the plan. To be able to do this, the diagram should be carefully compared with the established requirements and ensure that each of the primary functions and interrelationships are constituted correctly.

6.- Data Files

It's Ok.

7.- Execution

It's Ok.

8-10.- Clean Code

All variables must be in English, according to the review of the clean code, some variables were found in Spanish, and this does not comply with the standard.
