```
public void showPatientsMenu(Consultory consultory){
    boolean exit = false;
    int option = 0;
    int validator = 0;
    while (!exit) {
        System.out.println(x: "----About Patients----");
        System.out.println(x: "1. Add Patient");
        System.out.println(x: "2. Edit Patient Information");
        System.out.println(x: "3. Delete Patient");
        System.out.println(x: "4. Read Patients Information");
        System.out.println(x: "5. Go back");
        System.out.print(s: "Enter an option: ");
        while(true){
            try{
                Scanner scanner = new Scanner(source: System.in);
                option = scanner.nextInt();
                if(option < 1 || option > 6){
                    System.out.println(x: "That option is not available. Try again: ");
                }else{
                    scanner.nextLine();
                    break;
                }
            }catch(Exception e){
                System.out.println(x: "You just wrote string data. Try again: ");
            }
        }
    }
}
```

Exception for the choice of the option in the ShowPatienst menu, in the OdontoApp program.
