

PROJECT REVIEW

Teams: Code Crafters

Inspector: Team 4: Josue Isaac Marin Alquina

- **Github**

Apparently, all have worked, but there are some with few lines.

- **Interview**

In the interview only one member appears in the video.

- **Definition**

Add products.

Management inventory

Reserve system

Add client.

Management buys system

Verify and status items reserve.

- **Requirements (correct use format)**

(functional)

Reserve items

Add and search product.

Notify in email.

Product availability

Verify and status items reserve.

Update reserve

Management inventory

(No functional)

Store big amount of data

Guaranty security

The system be used all of day.

Have a maintain system.

System can be used in many devices.

- **Scope system**

Should work a different operation system.

- **Use case.**

In the use case, there all the classes

How recommendations change name in the class

- **Class diagram**

In the diagram class no exists class 'notify in email', bit everything else is correct.

In the class have aggregation, associations, but not have dependence, either multiplicity, do not leave classes alone and put direction.

- **Data files**

One file json

Need the json for each class.

- **Execution**

No product catalogs.

Added products are not saved.

Does not generate purchases.
